

Objectives/Objectives Management	User Control & Freedom	3	The Objective cards lack visible editing and deleting options for objectives. Moreover, the absence of an "Undo" feature after deleting or completing objectives reduces user control over accidental actions.
Credits and Debts	User Control & Freedom	2	There is no clear "back" button or easy way to return to the Credits & Debts dashboard. Users must rely on bottom navigation, which may not be intuitive for everyone.
Credits and Debts	Help Users Recognize, Diagnose and Recover from Errors	3	No error messages or guidance appear when data fails to load or when there are connectivity issues.
Categories	Consistency and Standards	3	The Income and Expenses tabs are not clearly labeled, making it difficult to determine which tab the user is currently viewing.
Categories	User Control and Freedom	4	No visible options to edit or delete existing categories. Users cannot modify incorrect category names or remove unused categories, which severely limits their control over the financial organization system.
Add Section	Error Prevention	2	No preview or context is provided for each option, which can lead users to select the wrong type (e.g., choosing "Add loan" when they meant "Add transaction") without understanding the differences.
